

A LOOK AT OUR DESIGN PROCESS

If you've been curious about working with us...

Architectural design is a blend of artistry, problem-solving, and technical expertise. Our role is to collaborate with you to ensure every detail aligns with your goals while addressing factors like functionality, aesthetics, and local building codes.

Swipe through to explore our phases of a design project.

PHASE 1A

VISION AND CONCEPT DEVELOPMENT

Every great project starts with a vision. We begin by listening to your ideas, needs, and aspirations. From there, we develop initial concepts that reflect your goals, exploring creative solutions to bring your vision to life.

PHASE 1B

SITE ANALYSIS AND FEASIBILITY STUDIES

The location of a project plays a significant role in its design. We analyze the site's conditions, opportunities, and challenges, including zoning regulations, environmental factors, and access, to ensure the project is feasible and optimized for its setting.

PHASE 2

SCHEMATIC DESIGN

This is where creativity meets precision. We refine the initial concepts into detailed designs that incorporate layout, materials, and structural elements. Every decision is made with your input, ensuring the design aligns with your vision and functional requirements.

PHASE 3

CONSTRUCTION DOCUMENTATION

We prepare the technical drawings, specifications, and documents required for permitting and construction. These detailed plans ensure that builders and contractors can accurately bring the design to life.

PHASE 4

PERMITTING & COMPLIANCE

Navigating local building codes, ordinances, and permitting processes can be complex. Our team ensures your project complies with all regulations, saving you time and avoiding potential roadblocks.

PHASE 5

CONSTRUCTION ADMINISTRATION

Architecture is a team effort. We collaborate closely with contractors, and the rest of the team as we remain involved throughout construction, providing oversight to ensure the work meets design standards, maintains quality, and stays on track.
